## **DETAILED ACTION**

### ***Reasons For Allowance***

The following is an examiner's statement of reasons for allowance: The prior art teaches a maximum surface roughness of 5.87umRz. The prior art fail to teach or suggest wherein the surface roughness in at least one of a metal surface adhering to the polymer elastic body in the hub and a metal surface adhering to the polymer elastic body in the inertia mass body is within the range of 15-50umRz (JIS B0601). In applicant's specification, page 17 table 4, applicant teaches that as the metal surface roughness becomes rougher, such as 5um, 10um, and 15um, strength of the slipping torque becomes larger such as 800 Nm, 933Nm, 1029Nm. Furthermore, on page 18, applicant teaches an increased surface roughness within the claimed range of 15-50um teaches wherein the unexpected result of the present invention is that the present invention had slipping torque about twice more than that of Comparative Example, and that high slipping torque is stably exhibited in the range of surface roughness of 15-40um.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
